

Type 2 Transaxle Disclaimer

The Type 2 Lowering Kit that the PRO's put together is perfect for the cruiser/small motor application that is looking for the perfect drop, that still gives the vehicle good ground clearance and dependable drivability.

There needs to be specific parameters that need to be abided by to ensure a properly working drivetrain.

- Stock engine application
- Freeway cruiser
- Quality Installer
- Proper alignment

The Freeway Flyer Type 1 Transaxle is modified with our Straight axle kit and OEM 1968 axles, aka Long Axle Long Spline. The transaxle is outfitted with a new type 2 nose cone and type 2 hockey stick. This transaxle is required to perform like a stock transaxle. Shift into gears fluidly and do that without grinding, popping out of gear or howling. If the vehicle is supposed to move forward, it moves forward. If reverse is engaged, it is to move backwards.

In the event the client is upgrading the engine to a non stock applications, upgrades will be needed to perform the same job as a stock transaxle is counted on to do. The upgrades can include;

- Super Diff
- Welded Gears
- Steel Shift Forks
- Chromoly Axles
- Heavy Duty Side Plates
- All New Erco/Weddle Gears
- Upgraded Case

Depending on the motor that will be used, the recommendation from the PRO's will accompany this request. Some combos require only one item above, some all of the above. That being said, nothing is unbreakable. If you give it hell, hell will fight back.

A stock transaxle can be vulnerable in non stock motor applications should you put it to the test, it has a simple job to perform.

Grinding/Popping out gear/Howling

If your Type 2 is running stock motor applications and one of the above is happening, and it is not a result of abuse, you have a 1 year warranty for Airkewld LLC to remedy. If you have a non-stock motor application, there is no warranty available.

Axles/Differential/Spider Gears/End Gears

If your Type 2 is running stock motor applications and one of the above is happening, and it is not a result of abuse, you have a 1 year warranty for Airkewld LLC to remedy. If you have a non-stock motor application, there is no warranty available.

The only goal in business is to have an amazing relationship with our clients. That means doing what ever we can to help and resolve the issue and make it happen, regardless of warranty.

***Opinions**

Because businesses all have opinions, it is not a secret, we all know it, please be aware of what transaxle companies will say and do to get your business. Unless you have long tenured relationship with them, you are a wallet to them. Reason we are stating this, if you have something happen to your transaxle and you are in another state, and your issue falls into the non-stock category, and you take the transaxle to another vendor, they will say what you want to hear and put their hand out for payment. I have been on both sides of this and I wish it was different, but it isn't.

Transparency

Transparency is everything us. The quality products, ease of doing business and always making sure you are smiling is the epitome of what Airkewld LLC is all about. If you have a transaxle disassembled by another vendor, please document with pictures the problem areas and either text to 623-518-3537 or to help@airkewld.com . The PRO's building these transaxles have over 30 years experience and an amazing reputation, we always aim to maintain that image and reputation.

In the event you pay to have the transaxle shipped to us and it was indeed our fault for the failure and you can provide photos of the stock motor applications, we will fix on our dime and ship back free of charge.
